Introduction

Despite common perceptions, cloud computing has the potential to enhance privacy safeguards used to protect personal information held by Government agencies.

This Better Practice Guide has been developed to assist agencies subject to the Financial Management and Accountability Act 1997 (FMA Act) better understand how to comply with privacy laws and regulations when choosing cloud based services.

Irrespective of choosing traditional methods of provisioning ICT requirements or cloud computing services, agencies need to be aware of their privacy and security obligations, conduct a risk-based analysis of their information, and ensure that the contractual arrangements they enter into with ICT providers adequately address their privacy obligations.

It is important to note that the Privacy Act 1988 (Privacy Act) does not prohibit the use of cloud computing and an agency, having conducted appropriate due diligence, may contract for cloud computing services and comply with its Privacy Act obligations, as with current ICT contractual practice.

Agencies are advised to conduct a risk-based analysis of their information, including a Privacy Impact Assessment, to determine the most appropriate ICT environment to deploy to support the classification of their information and business requirements.

Where an agency cannot adequately address their privacy obligations it will not be appropriate to transfer that information into a public cloud environment.

Why is the guide needed?

Cloud computing poses a range of privacy issues which an agency will need to address and mitigate with appropriate legal, contractual and operational procedures as the cloud service provider assumes responsibility for hosting the information.

This document contains a non-exhaustive list of issues related to privacy and information security that an agency should investigate when considering cloud based services to ensure that the contract they agree with cloud service providers adequately addresses the applicable privacy obligations.

This document does not advocate or prohibit the use of cloud computing services, favour the private over public cloud model, favour on-shore over off-shore cloud service providers nor does it discourage agencies from conducting appropriate due diligence as would be expected in any government procurement activity.

Agencies are reminded of their responsibility to comply with Commonwealth Procurement Guidelines and to read this document in conjunction with other Australian Government cloud computing related guidance, including:

- Defence Signals Directorate’s *Cloud Computing Security Considerations Paper*³;
- National Archives of Australia’s *Records Management and the Cloud*⁴;
- Australian Government Solicitor’s *Negotiating the Cloud – Legal Issues in Cloud Computing Agreements*⁵;
- Department of Finance and Deregulation’s
  - *Financial Considerations for Government Use of Cloud Computing*⁶;
  - *Community Cloud Governance – An Australian Perspective*⁷; and
  - *A Guide to Implementing Cloud Services*⁸.

**Key Resources**

**Privacy Act 1988 (Cth)**

The *Privacy Act*, and specifically the eleven Information Privacy Principles (IPPs) set out in section 14, regulate how Commonwealth agencies collect, use, and disclose the personal information of individuals.

Section 6 of the Privacy Act provides that ‘personal information’ is ‘information or an opinion (including information or an opinion forming part of a database), whether true or not, and whether recorded in a material form or not, about an individual whose identity is apparent, or can reasonably be ascertained, from the information or opinion’⁹.

**Section 95B**

Agencies should be aware that section 95B of the *Privacy Act* requires agencies to take contractual measures to ensure that contracted services providers do not do anything that would breach the IPPs.

Agencies that contract with cloud service providers will need to ensure that the contract stipulates personal information will be adequately protected by having the cloud service provider acknowledge in the contract that it will comply with the IPPs.

The obligations under section 95B of the *Privacy Act* apply regardless of whether the contractor is in Australia or off-shore.

When contracting off-shore, agencies need to make sure that they are still able to enforce the provisions of the contract. More information about privacy obligations for Commonwealth

---

contracts can be found on the Office of the Australian Information Commissioner’s (OAIC) website\(^{10}\).

**Privacy Amendment (Enhancing Privacy Protection) Act 2012 (Reform Act)**

The Reform Act \(^{11}\) received royal assent on 12 December 2012.

The changes to the *Privacy Act* will come into force in March 2014. There are three main areas of reform:

1. **New Australian Privacy Principles:**
   
   These new principles will replace the existing Information Privacy Principles (IPPs) that currently apply to the public sector and the National Privacy Principles (NPPs) that currently apply to the private sector.

2. **Credit reform:**
   
   Changes to credit reporting laws mean that some organisations will be able to collect more information about people’s credit worthiness.

3. **New powers for the Australian Information Commissioner:**

   The Commissioner will have enhanced powers, including the ability to:
   
   - accept enforceable undertakings;
   - seek civil penalties in the case of serious or repeated breaches of privacy; and
   - conduct assessments of privacy performance for both Australian Government agencies and businesses.

The aim of a single set of privacy principles should mean that it will be easier to comply with privacy laws, and for individuals to know what laws protect the privacy of their personal information.

Further detailed information on the amendments can be found at the [Explanatory Memorandum](http://www.comlaw.gov.au/Details/C2012B00077/Explanatory%20Memorandum/Text) to the Privacy Amendment (Enhancing Privacy Protection) Bill 2012 \(^{12}\).

Key differences between the IPPs and the APPs that agencies should be aware of when considering cloud computing options are requirements:

- to have a clearly expressed and up-to-date policy about the management of personal information by the agency, including information about likely disclosures to overseas recipients (APP 1);

- to provide more prescriptive notice when information is collected, including notice about likely disclosures to overseas recipients (APP 5);

- in some circumstances, before disclosing personal information to overseas recipients, to take reasonable steps to ensure that the overseas recipients do not breach the APPs in relation to the information (APP 8). Further, in some circumstances, an agency may be liable for a breach of the APPs by the overseas recipient (s 16C);

\(^{10}\) http://www.oaic.gov.au/  
• to take reasonable steps to destroy or de-identify information if:
  o the agency no longer needs the information for any unauthorised purpose;
  o the information is not contained in a Commonwealth record; and
  o the agency is not required by or under an Australian law or a court or tribunal order to retain the information (APP 11).

**Important Notice**

While the changes to the *Privacy Act* start on 12 March 2014 agencies are urged to start preparing now.

During 2013 the OAIC will publish on their website guidance about the reforms to assist agencies.13

Agencies should factor the impact of the Reform Act into any contractual arrangements they enter into during 2013/14 and beyond.

**Privacy Impact Assessment**

The OAIC recommends that agencies carefully assess potential privacy impacts by undertaking a Privacy Impact Assessment (PIA) prior to making a decision about the use of cloud computing.

Agencies should refer to the OAIC’s *Privacy Impact Assessment Guide*14 for further information.

**Key Issues**

**Notification**

When an agency collects personal information, *IPP 2 - Solicitation of personal information from individual* requires the agency to advise the individual concerned whether the information is likely to be disclosed to any other entity.

**Disclosure of personal information**

*IPP 11 - limits on disclosure of personal information* controls the circumstances in which an agency can disclose personal information. If an agency shares personal information with a contracted cloud service provider, this may be considered a ‘use’ rather than a ‘disclosure’ under the *Privacy Act*, depending on the degree of control the agency retains over the personal information.

An agency that gives up its control over personal information to an outsider is treated as *disclosing* that information. An agency that maintains control over personal information is treated as *using* that information.

The extent of control necessary to qualify the sharing of personal information with a contracted service provider as a use as opposed to a disclosure will depend on the circumstances. Some indicators that an agency maintains control over personal information shared with a contracted cloud service provider include:

---

• the agency gives the personal information to the cloud service provider to use for a limited purpose that assists or benefits the agency for example, providing the relevant services to the agency (including trouble-shooting or problem-fixing);
• an agreement between the agency and cloud service provider that binds the cloud service provider not to use or disclose the personal information except for the limited purpose or to its sub-contractors (who also agree to the same obligations); and
• an agreement between the agency and the cloud service provider that gives the agency the right to access, change or retrieve the personal information.

More information on use and disclosure of personal information can be found in the OAIC’s Plain English Guidelines to Information Privacy Principles 8-11\(^\text{15}\).

Agencies should consider whether the engagement of a cloud service provider that may store or process personal information off-shore can allow agencies to retain the degree of control necessary for the sharing of personal information to constitute a use, rather than a disclosure.

In most cases, the information can still be sufficiently within the control of the agency for the sharing to constitute a use even if it is hosted outside of Australia, provided that effective contractual protections are put in place by the agency, such as ensuring the agency has the right under the contract and in practice to access or recover the information at all times.

**Storage and security of personal information**

When an Australian Government agency determines to use cloud based services to host its information, irrespective of the cloud service provider being located on-shore or off-shore, the cloud service provider will need to ensure it complies with **IPP 4 - Storage and security of personal information**.

IPP 4 obliges an Agency to protect the personal information it holds with such safeguards as are reasonable in the circumstances. If it does not, it breaches IPP 4, even if no loss, unauthorised access, use, modification or disclosure actually takes place.

This includes being able to control security measures. When the provider is located off-shore, satisfying IPP 4 may be more difficult. By using a cloud service, an agency is relinquishing some degree of control over its data, but not its responsibilities to ensure compliance with the Privacy Act.

Agencies are responsible for understanding if the cloud service providers’ environment satisfies compliance with the Privacy Act.

Agencies are directed to the DSD interim guidance on Cloud Computing Security Considerations for further information regarding information security.

The most straightforward way to ensure the cloud service provider acknowledges that it will comply with the IPPs is by having the cloud service provider agree in the contract that it will comply with the applicable IPPs.

**Data segregation**

Where the information of multiple agencies is being hosted in a single cloud (a community cloud), there should be adequate separation and segregation between the various datasets to prevent any inadvertent disclosure.

Data segregation should also occur where a government department is sharing a cloud server with, for example, private sector organisations. This is also relevant where a government department has multiple business units that may require data segregation – for example, some larger departments have distinct, separate business units which hold information that other units should not need to access.

Many cloud service providers will have such segregation built into their cloud offerings. However, where there are specific concerns around separation and segregation, an agency should obtain all pertinent technical information from the service provider to ensure the proposed solution provides the required level of data segregation.

Where required, additional processes or arrangements for data segregation and security will need to be agreed with the cloud service provider. This may include a data classification system whereby only some information – such as non-personal or de-identified information – is stored in the cloud.

**Data destruction**

The IPPs do not contain an express obligation for agencies to destroy or permanently de-identify personal information that is no longer required, although this requirement will be extended to agencies by the Reform Act (see further below). In any case, destruction or de-identification of information will usually be a ‘reasonable step’ to prevent the loss or misuse of that information (as required by IPP 4).

Accordingly, agencies should carefully consider retention practices, subject to record keeping requirements such as those contained in the *Archives Act 1983* (Cth) (including their Records Disposal Authorities) or other legislation.

Agencies should ensure that information in the cloud can be permanently deleted when it is no longer required or at the end of the contract. Again, this can be achieved by having the cloud service provider agree in the contract that it will comply with the applicable IPPs and APPs once the Reform Act comes into force.

Note that obligations relating to the preservation of public records will still apply. (See National Australia Archives [*Records Management and the Cloud*])

**Transborder data flows**

Agencies should be aware that, when contracting off-shore cloud computing services, information may be processed or stored in jurisdictions with privacy and information protection laws significantly different from those in Australia.

This can make enforcement of contractual measures under s 95B of the *Privacy Act*, and other contractual obligations, such as those relating to data breaches, challenging. To mitigate this risk, agencies are advised to have the cloud service provider acknowledge in the contract that it will comply with the *Privacy Act*.

APP 8 will impose an explicit obligation on agencies to take reasonable steps to ensure that overseas recipients of personal information do not breach the APPs.

Agencies should note it may also be possible for foreign governments to access information held in their jurisdiction or to access information held in Australia by any company with a presence in their jurisdiction through legislation, regulation and mutual legal assistance treaties.

---

16 Data segregation can be physical or virtual (also known as data partitioning)

Agencies should therefore carefully assess the classification of their data, assess a suitable type of cloud environment for that data, determine what jurisdiction their data may transit or be stored in, review the cloud service contract and seek legal advice, as appropriate.

Risks arising from foreign legislation, regulation and mutual legal assistance treaties should be considered in conjunction with Australian legislative and regulatory requirements and with reference to the classification of the information and the type of cloud environment.

Agencies should consider the impacts of transborder data transfer for all copies of their data stored in a cloud environment including back-up and disaster recovery environments.

**Contract management**

Agencies may also wish to consider including requirements in contracts that would enhance control over personal information, in some circumstances these may be reasonable steps required by the *Privacy Act*. Issues to consider and be negotiated with providers include:

- where information will be physically located and whether the physical location of the information is of such significance to the agency that it should seek from the provider specific stipulations as to information location and make the relocating of information conditional upon an agency's permission.
- the legislative environment in those locations if the applicable governing law is the law of a foreign country;
- what type of security measures will be used for storage and what (if any) encryption is used during transmission;
- who will be able to access the information;
- whether access to information can be audited or third party audit findings can be shared;
- how backup copies of the information are protected;
- whether a requirement for information breach notification should be included in the contract;
- whether information no longer needed can be permanently deleted at the end of the contract, and
- who has control of the information at the end of the contract?

While such requirements are not explicitly required by the *Privacy Act*, they may be reasonable steps that are required to be taken and they can demonstrate a commitment to achieving best privacy practice. It should be noted that requirements outside of standard cloud service provider offerings may increase costs.

It is important that the contract and the cloud services be reviewed with the provider over the life of the contract, and in particular following any change to privacy laws, to ensure that information security measures are kept up-to-date.

**Acknowledgements**

The Department of Finance and Deregulation wishes to thank the staff of the Office of the Australian Information Commissioner, members from the Cloud Information Community and the considerable contribution from members of the Australian Information Industry Association for the collation and review of the material in this guide.
### Summary of Checkpoints

1. Has your agency established a policy or procedure for deciding when it will be appropriate to use cloud computing services?
   - Does the policy or procedure address the following?
     - will the proposal involve the storage or processing of personal information?
     - if so, is an assessment of the ability of a cloud solution to provide adequate protection to the personal information required?
     - if personal information is involved, what extra measures might be required?
     - what type of cloud service provider will be appropriate? (e.g. private, public or community)

2. Has your agency decided what it will use cloud service infrastructure for?
   - just storing
   - just processing
   - both storing and processing

3. Has your agency developed a contract with the cloud service provider that is consistent with s95B of the Privacy Act?
   - How will your agency ensure that the contract’s requirements are being met?

4. Has your agency considered what specific terms should be included in the contract to complement the general requirement under s 95B to adhere to the IPPs?
   - Some specific matters that could be addressed in the contract include requirements relating to:
     - data breach notification
     - the location of information
     - access to information by agency staff and individuals
     - audits

5. If personal information is to be disclosed or used to a cloud service provider, has your agency determined how that disclosure will be authorised?
   - express permission from individuals
   - individuals are notified in privacy notice/terms and conditions
   - by legislative provisions

6. If you are intending to use an off-shore cloud service provider, do you know where their head office is located?
   - What are the privacy implications?
7. Does your agency know where the data will be stored; keeping in mind the possibility it may be across different countries or continents? What are the Privacy implications? □

8. Keeping in mind privacy law reform, has your agency determined that there is data protection or privacy legislation in place in relevant foreign jurisdictions that, at a minimum, meets the requirements in the *Privacy Act*? Is the relevant law enforceable? □

9. Has your agency determined how the personal information will be kept separate from other organisations’ data housed in the cloud service provider’s infrastructure? □

10. Has your agency determined how employees of the cloud service provider will be prevented from unauthorised access to the data? Has your agency decided how it will control a cloud service provider passing personal information onto unauthorised third party organisations or using it for purposes other than those it was originally collected for? □

11. Has your agency determined how it will monitor the cloud service provider’s use and management of the agency’s information? □

12. Has your agency determined the controls (for example, encryption) that will be in place to ensure the security of personal information as it travels between here and possible overseas cloud data storage location? □

13. If an Australian citizen requests access or alteration to their personal information, has your agency put in place appropriate controls so that all copies can be retrieved and amended easily? Has your agency put in place arrangements to ensure that where an individual requests an amendment to their personal information and this request is not agreed to, it will be possible to attach a statement provided by the individual regarding the requested amendment to the record? □

14. Has your agency ensured that the cloud service provider will hold the personal information only as long as your agency needs it? Has your agency specified how the cloud service provider will manage their backup regime? Has your agency specified how personal information that is no longer needed is to be destroyed or de-identified? □

15. Has your agency determined what happens at the conclusion of the contract with the cloud service provider? Will information be able to be retrieved or destroyed (including all backups where appropriate) in compliance with the *Privacy Act* and associated legislation? □
